DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 22 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 22 discloses a computer-readable medium for providing synchronization in a receiver, the computer-readable medium being encoded with a computer program comprised of computer code used to perform various functions.

Claim 22 lacks the proper preamble necessary for a statutory computer program product claim. See MPEP 2100 for guidance on computer related inventions.

The examiner suggests a preamble as follows:

"A computer-readable medium containing computer executable instructions to perform a method for providing synchronization in a receiver..., the method providing..."

Correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-15, 17-21 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Saka, EP 0 689 324 A2.

Regarding claims 1, 3-15, 17-21 and 23, Saka discloses a synchroniser for use in a receiver which receives signals, said synchroniser including a digital signal processor, said synchronizer configured to provide a digital control signal, said control signal defining a plurality of different levels; control the level provided by successive ones of said control signals, successive ones of said control signal defining different values; convert said digital control signal into an analog control signal for controlling a mixing frequency and estimate the difference between the levels of successive ones of said analog control signal. Saka further discloses a method of error correction as claimed (col. 24, line 1-col. 26, line 49; figure 4).
